Subject: RE: Paper on retention rates of metallic oxides

Dan & Dave: After discussing the call from last week, Kokomo Opalescent Glass is willing to pursue a test of the metallic content of the produced glass, contingent on developing an agreed upon protocol. I think it would be useful to have a follow-up technical discussion on details of the protocol and the specifics of the test method that will be used. I'm going to be out most of the rest of this week, so maybe we could all discuss sometime next week. Thanks, Tom
